

## Fond du Lac has invested in harvesting local energy from the Sun and the Trees

Residential renewable energy on Fond du Lac takes the form of solar thermal power which means using the energy of the sun to heat your home instead of converting it into electricity. This is a photo of Daniel Stover who also received help improving the efficiency of his home to help solar panels energy go further. To read the whole story click here <http://mn.gov/commerce/energy/images/SS-Weatherization-Fond-du-Lac-Stover.pdf>

The Tribal Court/ Natural Resource Building is LEED certified which means it was built to use less energy than a standard building. Also to help reduce the carbon footprint of the reservation there is a 12 KW solar panel system on the roof of the building. These solar panels capture energy from the sun and turn it into electricity for the building.
